Scrum Elements - Roles

Product owner

who is responsible for the project, he understand everything in business project. **He care about business not the technical** Also he is :

- Responsible for Return On Investment (ROI)
- Final arbiter of requirements questions. *"يجاوب على الاسئلة للتيم*
- Focused more on the "What" not "How"

forecast

Product Owner always has consideration about the team. So he calculates the points to forecast when the project will be delivered **according to points that team will finish in every sprint.**

Scrum dev team

- Cross-functional group (every person has own tasks or job)
- Attempts to build a "potentially shippable product increment" every Sprint. (at the end of sprint customer want to see thing.)
- Collaborates
- Self-organizing

Scrum foundation recommends that teams should be small like 7

Team might have:

- Developer
- Tester
- Designer

Scrum Master

He's the coordinator(who takes care about the technical project) of the project, he make sure that everyone in the project works according to scrum methodology.

Sprint Planning Meeting

Scrum master the end of Sprint Planning meeting must ask the team

```
Are you committed to these [number] Product Backlog Items as a team?
Even if it turns out to require different tasks?
```

Sprint Review Meeting

Scrum master in the **Sprint Review Meeting** must have an agenda. e.g.

- Product Demonstration
- Product Owner declare what's done.
- (Optional) Measure velocity
- Stakeholder feedback

adding the new Items to Product Backlog Items

after finish the meeting, Scrum master must add the new items to the Product Backlog
